

SHOPPYGLOBE BACKEND (API Testing)

(GitHub Link: <https://github.com/HarshitJaiswal-24/shoppyglobe-backend>)

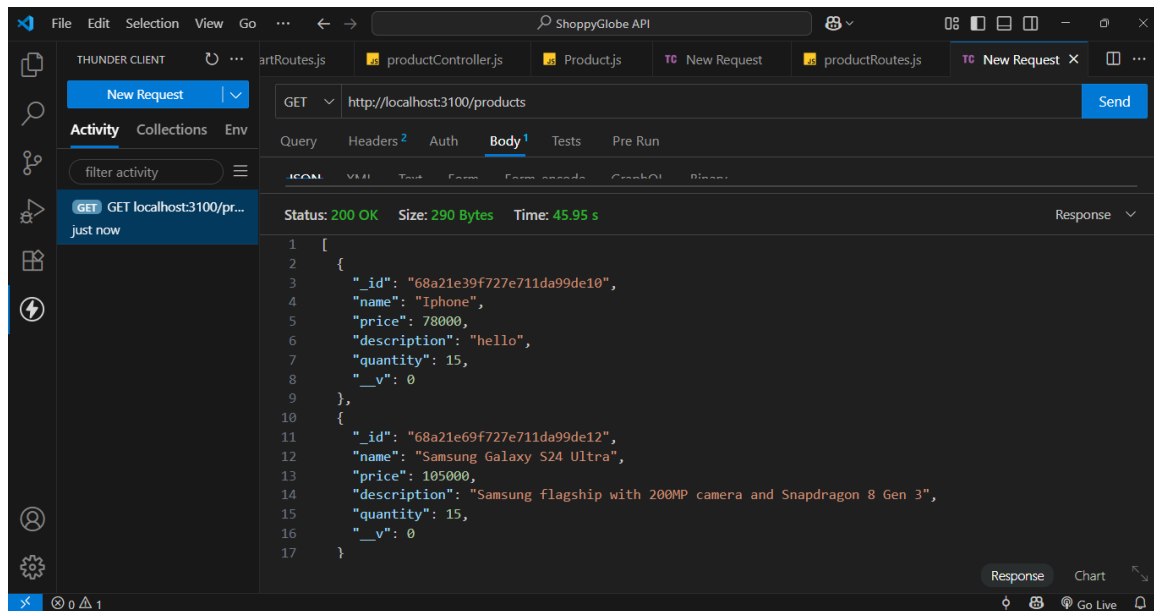

Creating dummy data by POST method

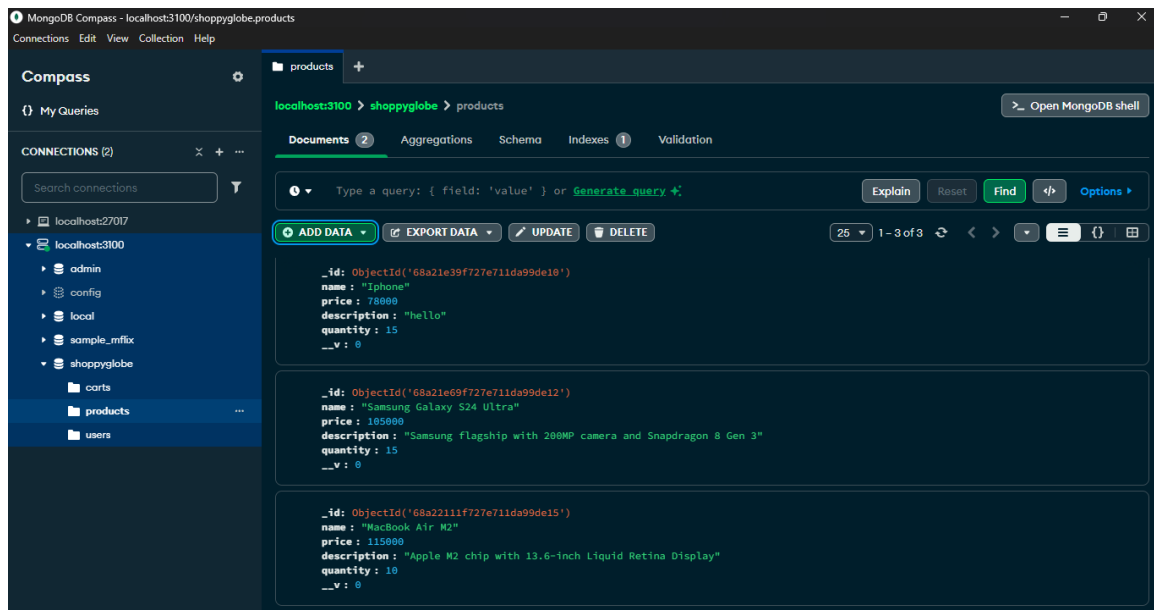

Database image

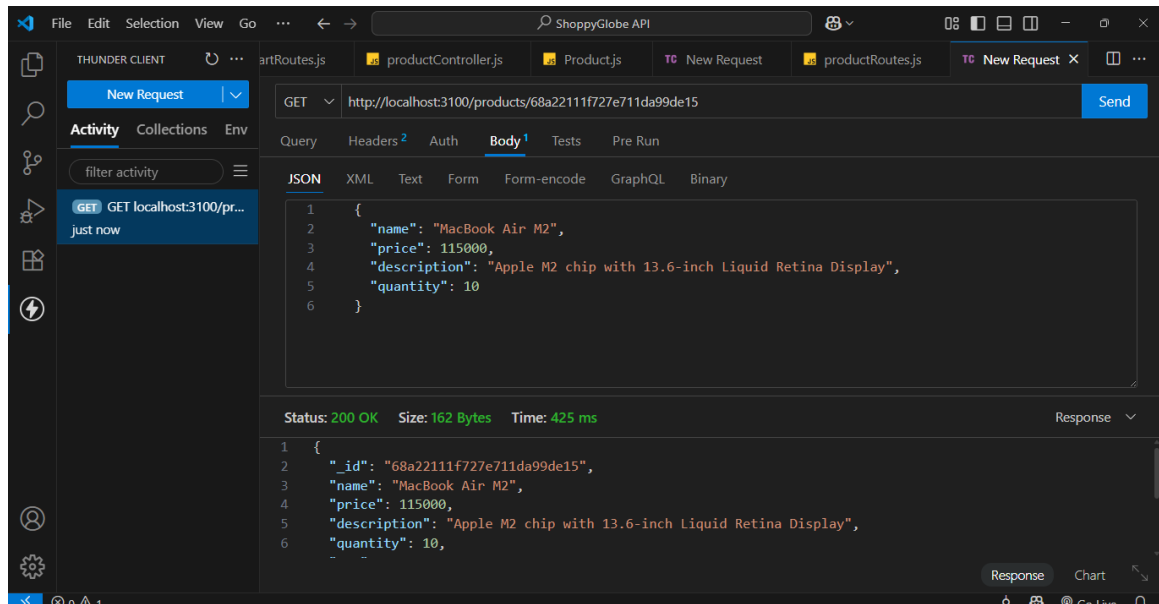

GET/products method: To fetch the list of products

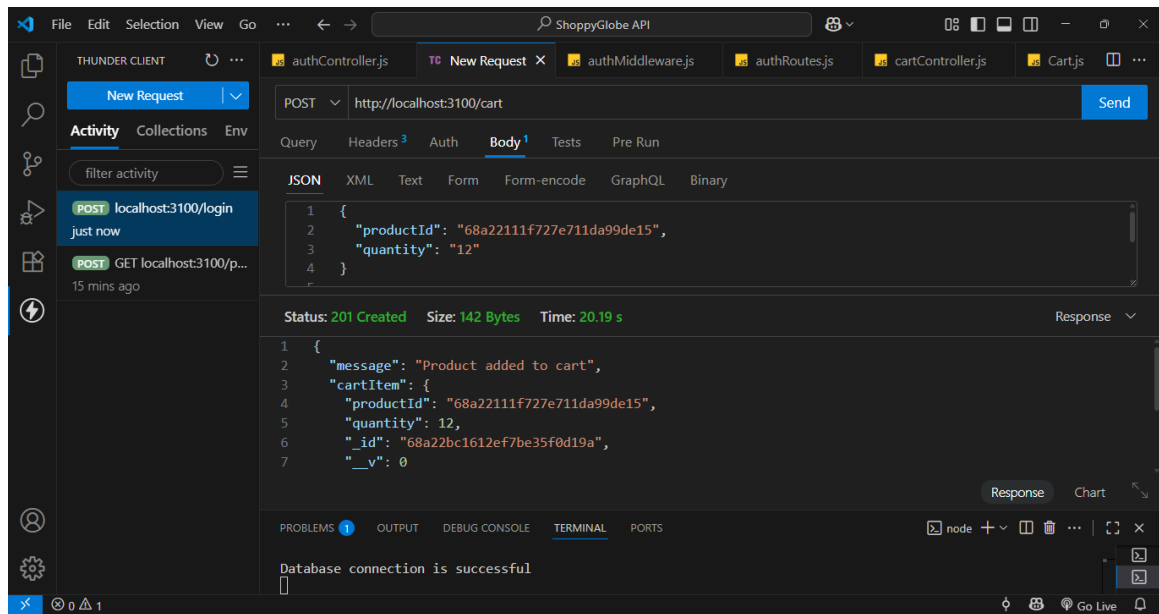

GET/products Database image

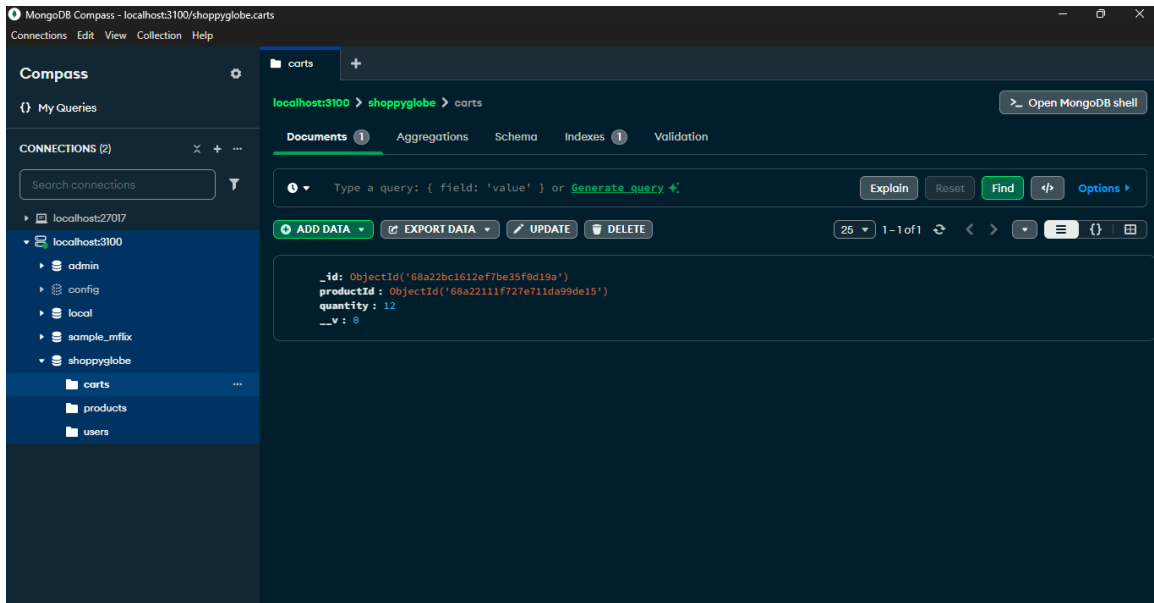

GET/product by ID

POST/cart : Add a product to the shopping cart

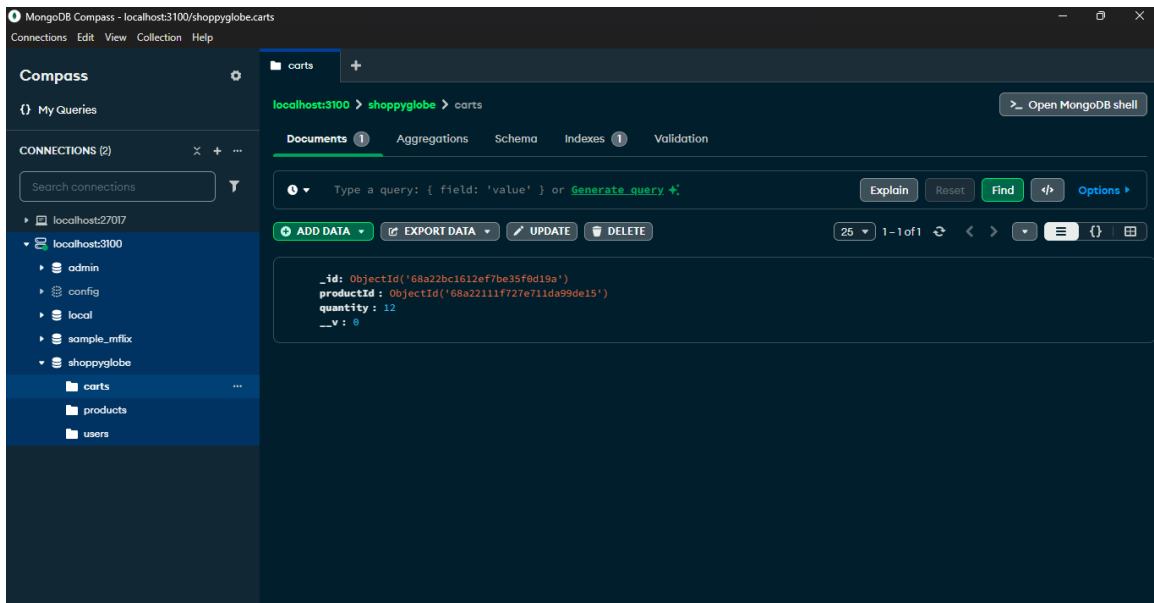

POST/cart Database image

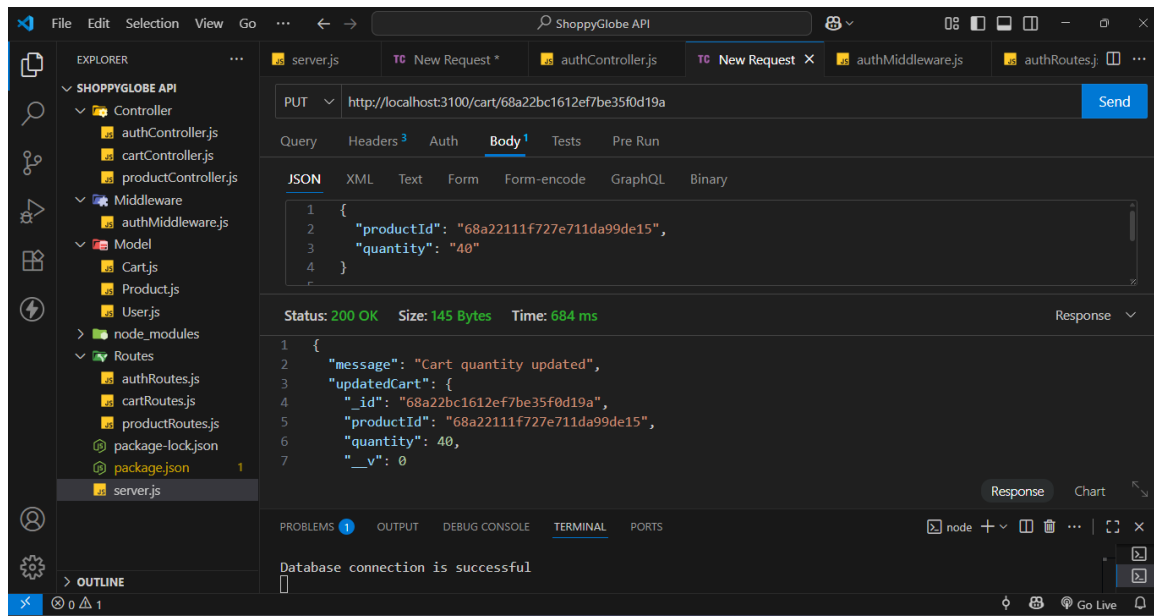

PUT/cart: Used to make any changes in the API.

For e.g. I have increased the quantity of the product using PUT/cart method.

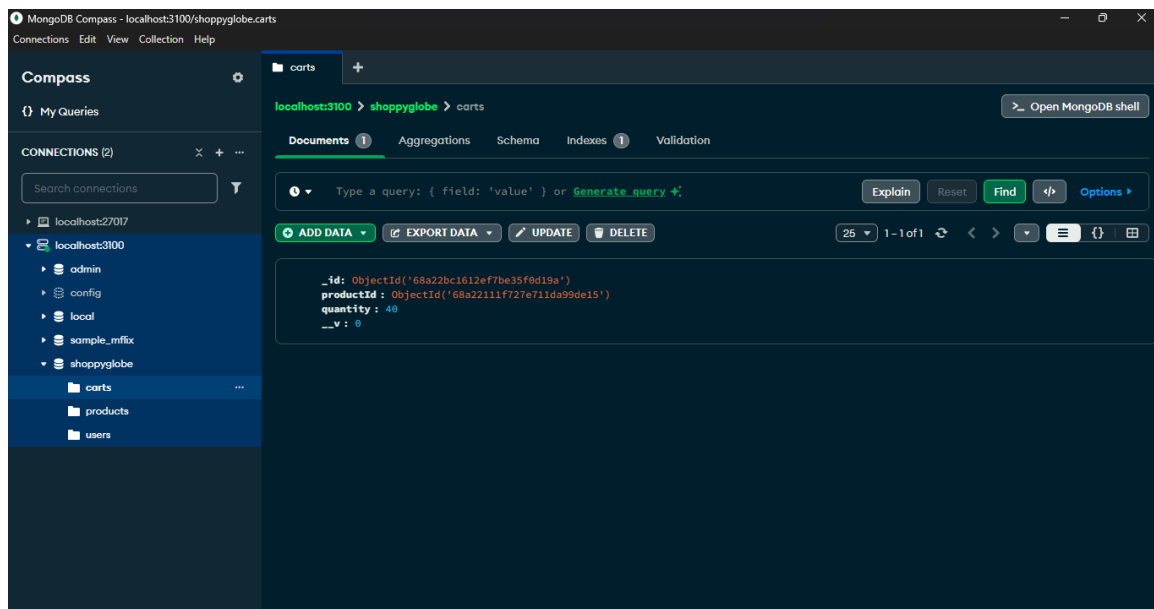

Let's check the database before updating any information

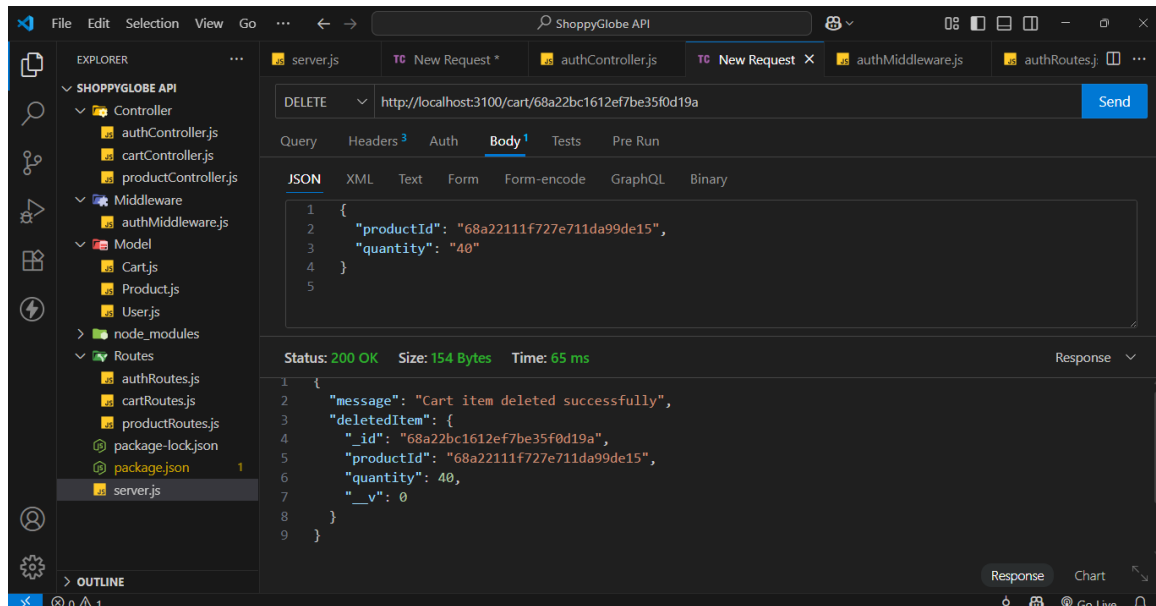

Now updating product quantity using PUT/cart method

Checking the updated quantity in database

DELETE/cart: Used to delete any product from the shopping cart.

As we can see in the database the cart item has been deleted
